Who we are

Since 1996, a brazilian company who believe in the transforming power of light.

We take care of the smallest details. We embrace technologies, innovative processes and extremely high quality components to enchant and ensure the best result in each project. Our customers rely on dedicated service at all stages, from understanding their needs and developing customized products, to delivering the best solution and after-sales service.

The inspiration for our creations is in conversation, in nature, in the scenes of everyday life. Under the look of architect **Ricardo Fahl**, our team is curious about world events to always think differently. The design awards are the coronation of a work that involves many talented hands before reaching the final public.

pendant
atmo p

In the pendant versions, there are three composition options: linear, circular, and triangular. They demonstrate the impressive power of the **atmo** luminaire to create floating light points that form genuine luminous sculptures.

linear

round

triangular
